

UNIT TESTS AND CONFIG

PREREQUISITES:

The task is a continuation of **Homework 6** and should be done in the same repo.

TASK 7.1

- Add unit tests for **User** entity controller methods using **Jest** library (<https://jestjs.io/>).
- Add unit tests for **Group** entity controller methods using **Jest**.

TASK 7.2

The information on DB connection (**connection string**) should be stored in **.env** file and should be passed to the application using environment variables with the help of **dotenv** package (<https://www.npmjs.com/package/dotenv>).

As an alternative package you can also use **config** (<https://www.npmjs.com/package/config>).

EVALUATION CRITERIA

2. **Jest** is installed. Some unit tests for controllers are added.
3. **Task 7.1** is implemented partially; unit tests are added only for a single entity controller.
4. **Task 7.1** is fulfilled to the full extent.
5. **Task 7.2** is fulfilled to the full extent.
- 5*. *Add integration tests for `getUsers` and `createUser` methods with mock `sequelize`.*
